Senior Product Designer · AI-Native & Agentic Experiences

adielnezri@gmail.com · (+972) 52 868 9657 · LinkedIn

Hi, I'm a senior product designer with 10+ years of experience, driven by curiosity about AI and how people work with it. I turn complex agentic and LLM capabilities into simple, trustworthy experiences.

SKILLS

UX leadership	Working in ambiguity · End-to-end ownership · Product vision & roadmap · User's voice in product decisions · Cross-functional geo collaboration · Mentoring designers
AI experience design	Autonomous & agentic experiences · AI agent evaluation · Generative-AI features · Human-in-the-loop · Trust & explainability · Responsible AI
AI prototyping & code	Prototyping in working code with Claude Code & GitHub Copilot · UI shipped via PRs · Guide for designers contributing code
Product design	Interaction design · Information architecture · Enterprise B2B SaaS · Data-heavy tools for admins & operators · Design systems

EXPERIENCE

Aug 2022 – Present

Microsoft - Product Designer 2

Copilot Studio Platform for building, evaluating, running and operating AI agents, workflows and apps.

- **End-to-end evaluation experience:** Led the end-to-end experience of a new product: how makers test their AI agents and decide they're ready to ship. Took it from first concepts to public preview (Oct 2025) and general availability (Mar 2026).
- **Evaluation in Workflows:** Led the experience for evaluating AI nodes inside agentic workflows, so teams can check a workflow before it runs and review what it did after. This is the foundation for trusting autonomous agents, one of the industry's biggest shifts today.
- **AI cost insights:** Navigated ambiguity in billing requirements, prioritizing operator needs alongside business KPIs. Delivered a top customer request: clear visibility into AI spend.
- **Leading design through mentoring:** Led design across the Evaluation area, critiques and guiding designers across geographies on their AI Copilot Studio work to deliver a consistent, high-quality user experience.
- **Making AI behavior understandable:** Designed how results show what an agent did, where it failed and what to fix, so people who aren't AI experts can trust and improve their agents.
- **The UX voice in product decisions:** Roadmap decision-maker with PM, engineering and data science. Prototyped early, before anyone had answers, to give the team something real to decide on.

Copilot Studio continued

- **Responsible AI:** Initiated and designed a safety evaluation experience, and led a cross-functional hackathon team to bring it to life.

Copilot for Sales One of Microsoft's earliest Copilot products, improving productivity for sale...

- **Opportunity Summary:** Led design for one of the first generative-AI features for sellers, from public preview (Apr 2023) to full release across Outlook, Teams and Dynamics 365. Built trust with a new dev team by explaining each design decision.
- **Real-time tips in Teams:** In collaboration with the Microsoft Teams group, designed live selling tips, built into Teams, that appear during customer meetings based on deal data and opportunities raised in the live conversation with costumers.
- **Extensibility:** Partnered with third-party companies such as DocuSign and Seismic to bring their data into Copilot for Sales. Shipped the first partner experience (DocuSign) ahead of Microsoft's biggest annual customer conference at Ignite and wrote extensibility UX guidelines that other teams reused.

Jan 2019 – Aug 2022

Wix - Senior Product Designer

Hive An embedded UX team helping strategic product groups grow faster.

- **Fast ramp-up:** Moved between strategic product groups, learning each domain, its users and its team quickly enough to own design from the start.
- **Influence without authority:** Partnered with each group's PMs, developers and designers as an embedded outsider, aligning them around user needs.
- **End-to-end craft:** Took features from ambiguous ideas through user research, flows, interaction design and high-fidelity UI to delivery, at Wix's pace without compromising usability.

2016 – 2018

Brio - UX/UI Designer

- **Start-Up Nation Central:** Led the entire UX/UI design of the Start-Up Nation Central website, the go-to platform for exploring Israel's tech ecosystem.
- **Range across industries:** Designed UX/UI for a wide range of clients, from agritech and fintech to smart-home devices and diamond supply, quickly learning each industry, its users and its constraints.

2015 – 2016

HelpAround (now RxWare) Product Designer

- **Sole designer:** Owned UX/UI end to end for an app connecting adults and parents of kids with diabetes to community support and urgent supplies.
